

# Akatab - Font Features

Akatab is an OpenType-enabled font family that supports the Tifinagh script. It includes a number of optional user-selected features that may be useful or required for particular uses or languages. This document lists all the user-selected features. These features are primarily specified using four-letter tags (e.g. 'cv17'). For more information on how to access OpenType features in specific environments and applications, see [Using Font Features](#).

Akatab also provides for a number of common features such as ligature formation, contextual substitution and diacritic positioning. It also provides right-to-left rendering of text. Most applications will make use of these features when the proper sequence of characters is entered.

This page uses web fonts (WOFF2) to demonstrate font features and should display correctly in all modern browsers. For detailed information, see [Using SIL Fonts on Web Pages](#). For a more concise example of how to use Akatab as a web font, see [Akatab Webfont Example](#).

*If this document is not displaying correctly, a PDF version is also provided in the documentation/pdf folder of the release package.*

## Common features list

The Akatab fonts contain logic that uses features to render certain glyphs and sequences properly. This logic processes the sequence of glyphs and produces the proper visual representation.

The sections below show the use of some formatting characters, notably the TIFINAGH CONSONANT JOINER (U+2D7F) and RIGHT-TO-LEFT OVERRIDE (U+202E). A recommended keyboard for Tifinagh characters and these special characters can be downloaded at the [Keyman Tuareg Tifinagh keyboard](#) web site.

### Contextual shaping

Two Tifinagh characters, TIFINAGH LETTER YAL (U+2D4D) and TIFINAGH LETTER YAN (U+2D4F), could cause ambiguity when they appear next to each other. To prevent uncertainty, the second character in the sequence is raised as in the example below:

ⵢⵢ ⵢⵢ ⵢⵢ ⵢⵢ ⵢⵢ

If the user's preference is slanted bars, the user-selected features *cv19* or *ss19* can be used, as illustrated in the user-selected font features section above.

### Ligature formation

Bi-consonant ligatures are formed after typing the character sequences shown in the examples below. Type the first character, e.g. ⵀ (U+2D31), the TIFINAGH CONSONANT JOINER ◌◌◌◌ (U+2D7F), and then the second character, e.g. ⵏ, to get the ⵀⵏ ligature.

ⵀ ◌◌◌◌ → ⵀⵏ	ⵢ ⵗ → ⵢⵗ	ⵢ ⵙ → ⵢⵙ	ⵉ ⵓ → ⵉⵓ
ⵐ ◌◌◌◌ → ⵐⵏ	ⵢ ⵕ → ⵢⵕ	ⵢ ⵓ → ⵢⵓ	ⵢ ⵉ → ⵢⵉ
ⵐ ⵓ → ⵐⵓ	ⵢ ⵏ → ⵢⵏ	ⵓ ⵏ → ⵓⵏ	ⵉ ⵏ → ⵉⵏ
ⵐ ⵏ → ⵐⵏ	ⵢ ⵓ → ⵢⵓ	ⵢ ⵓ → ⵢⵓ	ⵓ ⵏ → ⵓⵏ
ⵐ ⵓ → ⵐⵓ	ⵢ ⵏ → ⵢⵏ	ⵢ ⵏ → ⵢⵏ	ⵓ ⵏ → ⵓⵏ
ⵢ ⵓ → ⵢⵓ	ⵓ ⵏ → ⵓⵏ	ⵢ ⵓ → ⵢⵓ	ⵓ ⵏ → ⵓⵏ
ⵢ ⵏ → ⵢⵏ	ⵓ ⵏ → ⵓⵏ	ⵢ ⵓ → ⵢⵓ	ⵓ ⵏ → ⵓⵏ

### Right-to-left Tifinagh

Historically, Tifinagh did not have a fixed direction. Modern Tifinagh is commonly printed as left-to-right text and [The Unicode Standard: Tifinagh section](#) specifies its directionality as strong left to right while recognizing it can be bidirectional. Akatab has glyph and rendering support for writing in both directions. To get right-to-left behaviour and then reverse the direction, the user can use two invisible formatting characters

to change the direction of the characters and the text as follows:

1. U+202E (RIGHT-TO-LEFT OVERRIDE) for right-to-left Tifinagh  
The text that follows will be right-to-left. Additionally, the directionality of characters is changed to right-to-left.
2. U+202C (POP DIRECTIONAL FORMATTING) to revert direction for Tifinagh text  
The text that follows reverts to the direction of the text before the previous U+202E character.

## Akatab examples

The following text demonstrates Tifinagh left-to-right behaviour:

ⵝⵉⵏⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ

The following text demonstrates Tifinagh right-to-left behaviour using the U+202E character:

ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ

The following text demonstrates both Tifinagh directional behaviours using the U+202E and U+202C characters:

ⵝⵉⵏⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ ⵏⵓⵔⵉⵎⵉⵏ
